

IN THE SPECIFICATION:

On page 12, please replace the paragraph beginning on line 23 with the following:

As the result, when $\Delta N > N_{in} - N_t$ and the difference of revolutions ($N_{in} - N_t$) is ~~larger~~ smaller than the target rotational difference ΔN , the processing routine advances from step S5 to step S6 whereupon the driving duty *duty* of the duty solenoid valve is reduced by a set value α corresponding to the difference ($duty \leftarrow duty - \alpha$). When $\Delta N < N_{in} - N_t$ and the difference of revolutions ($N_{in} - N_t$) is ~~smaller~~ larger than the target rotational difference ΔN , the processing routine advances from step S5 to step S7 whereupon the driving duty *duty* of the duty solenoid valve is increased by the set value α corresponding to the difference ($duty \leftarrow duty + \alpha$).
